DETAILED ACTION

Status of Claims

Claim 1 is currently amended, Claims 2, 3 and 8-15 are as previously presented and Claims 4-7 are cancelled.

Response to Arguments

Applicant's arguments have been fully considered and are persuasive. The rejection of the claims has been withdrawn. Jensen does not disclose or suggest partitioning the aqueous solution coming from the first extraction stage into a first and second part as claimed.

Claim Objections

Claim 1 is objected to because of the following informalities: the “.” in line 25 needs to be removed. Appropriate correction is required.

In Claim 1, forming a copper-depleted organic solution in line 20 needs to be differentiated from the first and second copper-depleted organic extraction solutions.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 1793

Claims 1-3 and 8-15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 1 states that "extracting ... copper .. into a first copper depleted organic solution." According to the specification, the raffinate, which is the aqueous solution, is depleted of Cu, not the organic solution (page 4, lines 16-18). The organic extraction solution contains Cu (see Figure 1). The same argument is for the second organic solution and the last copper depleted organic solution.

Conclusion

The claims as presented are free from prior art rejections.
